PROFILE

Master's student in Management Accounting at the University of Southern Denmark, graduating June 2027. I combine a strong grounding in management accounting with hands-on experience in KYC/AML compliance, cash reconciliation and data quality. I build and test practical AI tools for finance and compliance work. Available right away for full-time, part-time and student positions in controlling, management accounting, internal controls, compliance and AI in finance.

WORK EXPERIENCE

Retail Sales Assistant, Ria Money Transfer Dec 2025 – Present

- Process and verify a high volume of daily transactions in a compliance-driven (KYC/AML) environment, working accurately under time pressure
- Identify warning signs in customer conversations and refer cases to the compliance team for further review
- Reconcile cash and transaction data at the end of each shift, tracing discrepancies back to their source rather than adjusting totals to match
- Maintain precise documentation and audit-trail records for full traceability, handling sensitive data in line with GDPR

Data Consultant, Aviation Cloud (ForeFlight) Jun 2023 – Feb 2025

- Main point of contact for partner stakeholders across multiple countries, coordinating communication and follow-up to keep projects on track
- Identified and resolved data inconsistencies across partner data feeds, so the data could be trusted before further use
- Led the end-to-end onboarding of a new company partner, structuring documentation and verification workflows
- Adapted communication across cultures and organisational levels; received a recommendation for professionalism and adaptability

AI PROJECTS · details and live demos in my portfolio

Company Policy Assistant · Python, Gemini models, vector search, Slack, Cloudflare
Slack chatbot that answers employee questions from 98 company policies and cites its source. Compared three approaches on 22 questions; vector search found the right policy 95% of the time with nine times fewer tokens.

Examiner Mode: oral exam simulator · Claude, Python, JavaScript, GitHub Pages
Feature that reads exam questions aloud, asks follow-ups based on the student's spoken answer and gives a feedback checklist. The teacher had not seen an idea like it from a student before.

Transfer Referral Assistant · Claude, prompt design, fictional KYC/AML cases
Prototype that checks a teller's notes against four warning signs and drafts a referral to compliance. Compared a keyword check with an AI review on 8 cases (7 vs. 10 of 10 warning signs found); the tool supports the teller and never decides.

EDUCATION

MSc in Economics and Business Administration – Management Accounting Sep 2025 – Jun 2027
University of Southern Denmark · Specialisation in Strategy Management

- Thesis (in progress, with a co-author): AI and the performance evaluation of accountants, a case study with accounting firms
- Coursework: Advanced Management Accounting (agency theory, activity-based costing, transfer pricing) · Business Strategy · AI in Accounting and Business · Human Resource Management · Customer Value & Pricing
- Selected grades: 12 in Business Strategy · 10 in Advanced Principles of Management

BSc in Market and Management Anthropology Sep 2022 – Jun 2025
University of Southern Denmark

SKILLS

Finance	Management accounting and performance measurement · Reconciliation · Documentation and internal controls · Compliance (KYC/AML, GDPR)
AI	Building AI tools with Claude · Prompt design · Testing AI output · Vector search · LLM APIs
Tools	Excel · PowerPoint · Python · SQL · JavaScript/HTML · GitHub
Languages	Romanian (native) · English (fluent) · Danish (intermediate, actively learning)
